MONTHLY WEATHER MAP

April 1959

LIBRARY
JUN 10 1959

General Summary of Weather Conditions

Temperatures across Canada in April 1959 were generally fairly near seasonal values, with few important departures. Precipitation was rather spotty, although large differences from the usual April amounts were found in a few areas.

Almost everywhere in Canada, the number of hours of bright sunshine was well above the long-term average for April.

April temperatures in the Island of Newfoundland ranged from a little below normal on the Avalon Peninsula and along the west coast to two degrees above normal in the region of Buchans and Corner Brook. Temperature excesses were rather larger in Labrador, Goose Bay reporting a mean temperature five degrees warmer than usual for April.

Precipitation was generally fifty to seventy per cent below normal for April in the southeastern and western parts of the province and in most of Labrador, but Gander reported precipitation only 12 per cent below normal, and there were excesses of forty to fifty per cent at Buchans and in the southeastern corner of Labrador.

Temperatures in April were rather above seasonal values throughout the Maritime Provinces. Excesses were generally small in Nova Scotia and along the Bay of Fundy coast of New Brunswick, but averaged about two degrees throughout the remainder of New Brunswick, Prince Edward Island, and the region of Nova Scotia northward from Halifax to Truro.

Precipitation in April was twenty to thirty per cent above normal along the Atlantic Coast of Nova Scotia from Cape Sable to Canso - Halifax reported the rainiest April in 24 years - but elsewhere throughout the Maritime Provinces April was drier than usual.

Deficiencies averaged about forty to fifty per cent in southern New Brunswick and Prince Edward Island, and twenty to thirty per cent in northern New Brunswick. Snowfall was deficient almost everywhere except on Cape Breton; on April 24-25, Sydney reported 11.4 inches of snow, a new 25-year record for April, and the total month's snowfall there of 17.2 inches was almost twice the usual April amount.

April temperatures in Quebec were generally warmer than usual in the south and a little below normal in the north. Along the St. Lawrence and Saguenay Rivers, and in the eastern townships, temperatures were uniformly two degrees above normal. Northward, however, temperatures were seasonal or a little below.

Precipitation in Quebec was generally below normal. The St. Lawrence Valley, with the Eastern Townships and the valleys of the Gatineau, St. Maurice, and Saguenay Rivers, was a region of thirty to fifty per cent deficiency. The western part of Northern Quebec also showed deficiencies of fifty or sixty per cent. A large strip northward from Seven Islands however, had precipitation excesses, 73 per cent at Seven Islands and 86 per cent at Knob Lake. There were small excesses, also, scattered throughout the Gaspe Peninsula.

Temperatures through most of southern Ontario averaged about two degrees above seasonal for April. North of Huntsville, in the Niagara Peninsula, along the shores of Lake Huron and in Essex County, however, excesses were very small, and there were small deficiencies along the shores of Georgian Bay. Throughout Northern Ontario, temperatures were generally about normal or a little below.

Precipitation was deficient in the eastern counties of Ontario, with most stations between the Ottawa and St. Lawrence rivers reporting falls thirty to fifty per cent below the usual April values. Along the northern shores of Lakes Ontario and Erie, however, excesses of thirty to fifty per cent were general. Near Lake St. Clair, also, and to the east of Lake Huron, precipitation was heavy, about thirty to seventy per cent above normal for April. Away from the lakes, however, falls were about normal, and there were small deficiencies at London and Kitchener. Northeastward from Lake Huron to Lake Temiskaming there were excesses of forty or fifty per cent, but elsewhere through eastern Northern Ontario falls ranged from twenty-five per cent above normal to twenty-five per cent below. West of Schreiber, however, Northwestern Ontario was relatively dry, with deficiencies of fifteen to twenty per cent at Kenora and Sioux Lookout increasing southward to seventy or eighty per cent near the International Boundary.

Temperatures averaged about seasonal for April in southern Manitoba, but north of Lake Winnipeg were generally three to five degrees below those usual in April. In southwestern Saskatchewan and in Alberta south of the Red Deer River, temperatures averaged one or two degrees below normal, with the larger anomalies south of the South Saskatchewan River and in the Alberta foothills. The central and northern parts of Saskatchewan and Alberta, from southeastern Saskatchewan northwestward to the Hay River, had temperatures above the usual April values. The largest anomalies were in a belt from North Battleford northwestward to the Athabasca River; in this belt, temperatures averaged four or five degrees above normal.

With a few exceptions precipitation was deficient throughout the Prairies in April. There were a few excesses, usually small, along the Saskatchewan-Manitoba boundary, southwest of Regina, in the extreme south of Alberta, and northeast of Calgary. Throughout the region, however, deficiencies ranged from forty to seventy per cent. Along the British Columbia-Alberta boundary, however, precipitation far exceeded normal values, with Banff, Lake Louise, and Jasper all reporting more than twice the usual April fall.

April mean temperatures in British Columbia were generally a little below normal, with excesses of about a degree along the Pacific Coast of Vancouver Island and the Queen Charlotte Islands, and slight deficiencies in most of the interior. In the north central part of the Province, there were excesses of two degrees from the Skeena River northward to the Liard River.

Precipitation in British Columbia in April showed well marked areas of surplus and deficiency. Falls were heavy near the British Columbia-Alberta boundary, and stations along the Columbia River, from its source to Upper Arrow Lake, reported precipitation about twice the usual April amount.

Although Vancouver had only about sixty per cent of the normal rainfall, totals along the Lower Fraser Valley were generally about twice the April normal. Rainfall was excessive, also, in the southern part of Vancouver Island. Victoria reported 3.05 inches of rain, a fall of two and half times normal, ninety per cent of which fell in the last six days of the month, for the wettest April in 71 years of record. Precipitation was above normal, also, in the Upper Fraser Valley, and in a belt westward to the Pacific. In the region of the Liard River there were more than the usual falls, with excesses of fifty to a hundred per cent. On the other hand, much of the interior of southern British Columbia was relatively dry. Throughout the area of the Okanagan Valley, the Thompson River, and Lower Arrow Lake, precipitation was fifty to sixty per cent below normal. There were also deficiencies of twenty to thirty per cent along the mainland coast north of Vancouver and along the east coast of Vancouver Island north of Victoria.

In the Yukon Territory, temperatures in April averaged about three degrees below normal. Precipitation was about fifty per cent deficient in the south western section of the Territory, but Dawson and Mayo reported near normal falls, and in the southeast, Watson Lake had about twice the normal amount.

Temperatures were below normal throughout the Northwest Territories in April. Deficiencies reached four to six degrees in Keewatin, but over most of the region, temperatures were about two degrees below normal. On the northwestern fringe, however, Mould Bay reported a mean temperature eight degrees below the seasonal value for April.

Precipitation was generally about forty to fifty per cent below normal in the Mackenzie Valley in April. To the north of Great Slave Lake, however, precipitation was about twice the usual April amount. Keewatin was relatively dry, with only about half the normal fall. In the extreme north, falls were about normal. In the centre of the region, Cambridge Bay and Resolute reported excesses of twenty to thirty per cent. In eastern Franklin, there was a deficiency of 56 per cent at Arctic Bay and surpluses of 76 per cent and 27 per cent at Clyde and Frobisher respectively.

April 1959

TEMPERATURE, PRECIPITATION AND SUNSHINE

The temperatures for the month are given in degrees Fahrenheit in the temperature columns under the following headings:
MAX. The highest temperature.
MIN. The lowest temperature.
MEAN The mean temperature for the month.
The remaining columns give the following information:
PRECIP. The total precipitation in inches for the month including the rainfall and the equivalent of the snowfall.
SUN The total hours of bright sunshine for the month.
SNOW ON GRND. The depth of snow in inches lying on the ground at the end of the month (when reported).
The use of A following the station name indicates that the meteorological observations are taken at Airport offices.
